- Move Management
- Code & ADA Compliance
- Maintenance Engineering
- Energy Use Audits
- Inspection Programs
- Tank Inspections
- Forensic Engineering
- Inspection Programs
- Life Safety Engineering

A city hall is the symbol of a community to the public-at large, and must present the image of the community in a welcoming and dignified manner. From small township halls to large multi-building civic center complexes, Sidock Architects has over 50 years of experience in planning, designing, and implementing city hall projects that successfully accomplish this mission. We understand the often conflicting project requirements of budget, space needs, and community image, and we have, time and again, worked closely with stakeholders in order to create a

project that melds these needs into a successful project. We have completed new facilities, historical renovations, additions, and re-purposed facilities, for small township halls, large urban city halls, combined city hall/police/fire, and multiple building civic centers, and administrative offices. We have a comprehensive understanding of the needs of these types of facilities, as well as the fact that many, if not most, projects must be completed within compressed time schedules and budgets.
