- Maintenance Engineering
- Energy Use Audits
- Inspection Programs
- Tank Inspections
- Forensic Engineering
- Inspection Programs
- Life Safety Engineering

With Sidock Architects' parent Company, Sidock Group, having originally been founded as a chemical engineering firm, one might say that industrial projects are "in our blood". We have completed, literally, hundreds of industrial projects from simple warehouse facilities to highly complex projects such as steel mills, power plants, and refineries. From new facilities, to renovations and additions, Sidock has completed just about every type of industrial project imaginable. Our project types have included

light industrial, manufacturing, injection molding, steel, power generation, petroleum, chemical, cross dock, warehouse, storage, ink plant, food processing, pharmaceutical, automotive, to name a few. In addition to the traditional services that you would expect from a large full service firm, Sidock also offers numerous non-traditional services such as certified tank inspection programs, environmental studies, air permitting, comprehensive OSHA compliance studies, forensic engineering, conveyor systems,

machine engineering, facility inspection programs, and LEED services. Additionally, our industrial and process engineering expertise has allowed us to become recognized experts in alternative energy projects including bio-mass and waste energy recovery.
