- Signage
- Furniture, Fixtures, and Equipment
- Move Management
- Code & ADA Compliance
- Maintenance Engineering
- Energy Use Audits
- Inspection Programs
- Tank Inspections
- Forensic Engineering
- Inspection Programs
- Life Safety Engineering

Court buildings, by their very nature, must represent a dignified symbol of the judicial process that takes place within. Sidock Architects has professional staff experience in the design and construction of a group of District, Probate, Circuit, and Federal District Court structures. These facilities have involved creation of new free-standing structures, re-purposing of existing buildings, including a historic post office for a Federal District Court, and two stone churches for a State District Court. We have also been

involved in the design of court facilities attached to Police or City Hall buildings. Each court facility requires understanding of the judicial process in terms of symbolism and the practical accommodations for that process. Details of the Judge and Jury sight lines, witness location, whisper distances, accessibility, lighting and electronic capabilities for recording, data, and video arraignments are key design issues. With our experience, Sidock Architects also understand prisoner transfer and security issues with

respect to not crossing the public and staff circulation, and secured waiting cells location for ease of access to the court proceedings. We understand duress alarm systems and unobtrusive ways for providing bullet protection material for personal safety. With more than 30 judicial facilities commissions completed by our staff, we have the experience and the design expertise for functional and creative solutions for judicial facilities.
