- Maintenance Engineering
- Energy Use Audits
- Inspection Programs
- Tank Inspections
- Forensic Engineering
- Inspection Programs
- Life Safety Engineering

Police and Public Safety buildings are complicated structures. They are virtually "buildings within buildings", having differing functions with overlying layers of security and safety issues. Sidock Architects provides an extensive range of experience in the design and construction of law enforcement projects, and broad knowledge of how these buildings work. Our staff have been involved in more than 40 police and public safety buildings - unmatched by any firm in Southeast Michigan. With this experience, we understand the requirements for security in prisoner

handling, perimeter safety from potential terrorist-like activities, visual access for multiple functions and visual back-up by command staff, in addition to space allocations for video arraignment within prisoner traffic flow, combat granular gun ranges for increased training/certification, security and air quality concerns in evidence storage and crime labs, durable finishes in all traffic areas, and infrastructure capable of handling technology advancements. We are ready to help you design your facility. Sidock Architects, and it's component firms of Wilkie & Zanley

and CDPA, have conducted facility needs studies, designed additions and renovations to existing buildings, converted existing structures to new police and public safety facilities, designed combined police/court, police/fire, and combined city hall structures, in addition to new free-standing police buildings. With the base knowledge of how a modern law enforcement building goes together, we will work directly with you and your key staff to plan a building exactly how your Department operates and incorporating flexibility for the future.
