- Inspection Programs
- Life Safety Engineering

At some point in their lives, every person will be in need of some type of medical care, whether it be a routine office checkup, teeth cleaning, or major medical procedure. Sidock Architect's has been designing and engineering medical facilities of all types for over 50 years, and we understand how to balance the needs of the medical group's limited budget and compressed project schedule with the needs of the patients for a facility that is warm, inviting, and puts them at ease during what might be a very stressful and

vulnerable moment in their lives. Our project experience runs the gamut from individual doctor's suites, to small stand alone dental offices, to medium sized medical office buildings, to large major hospital renovations and additions. Our facilities have included patient rooms, examination rooms, surgical suites, MRI, Radiology, CAT scan, physical therapy, administration, testing laboratories, research and development, hospice, emergency room, and dental procedure rooms, to name a few. Sidock is well versed in all aspects

of most medical project types. We also have vast general experience in field investigation, systems upgrade engineering, major renovations, and additions. Additionally, Sidock has completed a number of LEED certified projects, which is important as many health systems desire to construct environmentally responsible facilities.
