Sidock Architects' team of professionals has provided architecture and engineering services to both state and federal government projects for the Air and Army National Guard. These projects for the Department of Defense, the United States Property and Fiscal Office, and the Department of Military Veterans Affairs have included training facilities, administrative offices, military personnel housing, aircraft training, emergency medical and fire training, and live fire weapons training facilities. Our familiarity

with DoD design guides includes those for the Departments of the Army and Air Force, National Guard Bureau, the Army Corps of Engineers Design Guide, Federal Acquisition Regulations, Anti Terrorism/Force Protection Standards, and the Whole Building Design Guide enable us to provide appropriate and sustainable solutions for the training of our defense forces and the care of our veterans when they complete their service to our country. Members of our architectural team have secured and maintained an

Indefinite Delivery/Indefinite Quantity Contract with the US-PFO for over 12 years, and Sidock was recently awarded a new five year contract with national status, enabling the firm to provide A/E services to federally owned projects anywhere in the United States. Our understanding of the federal contracting process also enables us to move efficiently through the administrative portions of the process to save time and resources during the assignment and facilitation of task orders.
